SVG Brain Logo Storyboard

- Visual
  - Brain is outlined only, with no fill color (empty or faint outline).
  - A background track is visible only if the backgroundColor prop is passed; otherwise, it remains transparent.
  - Conveys to the user that no progress has been made.

- Label/Props
  - If showLabel = true, the text label displays "0%."
  - This stage corresponds to totalPercent = 0 or (value=0, maxValue>0).

- Animation Note
  - A smooth "unwinding" animation begins here: moving from 0% to 25% over about 0.5s, using ease-in-out.
  - The fill gradually starts to appear in the brain's pathways, matching the client requirement for a smooth, progressive "fill up."

- Visual
  - Brain outline transitions over 0.6s from 0% to 25% with ease-in-out.
  - About one-quarter of the brain's pathways are filled with the primary gradient or solid color.
  - The unfilled portions remain a lighter outline, creating an "unwinding" effect as the fill moves from the lower loop upward.
  - Colors gradually transition to convey progress throughout this stage.

- Label/Props
  - If showLabel = true, the text reads "25%."
  - totalPercent = 25 or (value=1, maxValue=4).

- Animation Note
  - The fill starts at the lower loop and moves upward over 0.6s.
  - Uses ease-in-out for a smooth start and finish.
  - You might introduce a subtle glow or intensify the color slightly to accentuate the feeling of the shape being gradually "filled."

- Visual:
  - About half the logo is now filled. This might involve the second or central portion of the brain's shape filling in.
  - Consider if the gradient or color intensifies at mid-progress.

- Label/Props:
  - Label says "50%" if showLabel is enabled.
  - totalPercent = 50 or (value=2, maxValue=4)

- Animation Note:
  - Another 0.5s transition from 25% → 50%. Possibly a slightly different color or a subtle glow to signify reaching midpoint.
  - Good moment to show a minor highlight or pulse.

- At 50% progress, the fill color remains consistent (or slightly shifts hue). Label transitions from '25%' to '50%' in ~0.5s with ease-out.

- Visual:
  - Three-quarters of the brain's shape is filled.
  - The unfilled region is now just a small portion.

- Label/Props:
  - "75%" label if applicable.
  - totalPercent = 75 or (value=3, maxValue=4)

- Animation Note:
  - Could incorporate a slight change in color or brightness to indicate that you're nearing completion.

- Timing:
  - Another ~0.5s transition from 50% → 75%.

- Brain fill coverage is at 75%. Subtle color shift to a lighter or more vibrant tone above 50%. Label updates to '75%.

SVG Brain Logo Storyboard

- Visual:
  - The brain is fully filled with the final gradient or color.

- Label/Props:
  - "100%" label if showLabel = true.
  - totalPercent = 100 or (value=4, maxValue=4)

- Animation Note:
  - A short "finishing flourish" or bounce effect can happen when it hits 100%
  - Consider a quick highlight or glow to emphasize completion. (Brief glow around the outline)

- "At 100% progress, the shape is fully colored. A brief pop animation signals completion, and the label shows '100%.'"
